Transforming Care

10 October 2017

Introduction

- Welcome & Outline of workshop

Aims of Transforming Care

- Building the Right Support, Oct 2015,is the key document that outlines the guiding principles for Transforming Care.
- *Now 6 Transforming care Partnerships in London*
- *Transforming Care supports a wide range of individuals*
  - All ages,increasing no's of younger people (15-16 year olds).
  - Individuals with very long periods in hospital or institutional type settings.
  - People with recent short hospital stay, but need a more robust package to stay stable in the community.
  - Individuals with a range of convictions or charges.
  - People with primary mental health conditions, nature of dual diagnosis means longer length of stay in hospital or more frequent admissions.

What are each of the TCPs aiming for?

- Each TCP has a plan to deliver their Transforming Care priorities over the three year programme.
- With initiatives ranging from;
  - Improved joint working across local areas.
  - Offering improved crisis support services.
  - Reviewing gaps and increasing the specialist skills of local teams to support this cohort.

What is the London picture?

- As at *September 2017?* there were approximately *……* Transforming Care patients in hospital beds from London, often in hospitals outside London.

- Approximately ….in specialist commissioning beds with ……..in CCG commissioned beds.

- *In the last 12 months* we have reduced our inpatient number by ………% and has consistently discharged more patients than we have admitted since February 2016.

What is the aim for London?

- By the end of 2018/19 London aims to reduce hospital bed use by 35% - so number of beds will be 33.5 per million population.

- *What this means for the TCP's:*

- *Amelia – what we agreed is to give figures per TCP based on trajectory eg. SEL need to discharge 20 people by 2019, 5 are in CCG beds and 15 are in forensic beds – don't know if a table would be the best way to do this?*
